

FastGate™ Grasp

Portable Access Control

Get a grasp on who enters your facility!

The revolutionary FastGate™ Grasp is a sleek yet rugged handheld computer that actively engages security personnel in the access control and tracking process while giving management the ability to analyze daily activities. This second generation system is lightweight and designed to efficiently link individuals, their vehicles, their passengers and their authorized ID cards in an easy-to-use, small handheld device. The FastGate™ Grasp encompasses a wide variety of technologies including a 5 MP digital camera, RFID, smart card, facial recognition, fingerprint and 1D/2D barcode reader.

Information captured by FastGate™ Grasp is immediately synchronized and validated using a pre-populated database to present security officers with on-screen images and/or alerts when unauthorized individuals or vehicles enter a facility. The FastGate™ Grasp has all the conveniences of a cell phone, PDA, computer, scanner and imager and can store 5,000+ individual entries.

Using a transfective, sunlight-readable touch screen, the FastGate™ Grasp gives security personnel the ability to access activity logs and review an individual's captured data at any time. The system allows for a broad range of detailed reporting capabilities that includes time/date stamped referencing.

- >> Icon based software, barcode reader, camera and cell phone
- >> Easy to use touch screen and keyboard

- >> Digital camera captures image of driver, passengers, license plate, vehicle, cargo
- >> Full detailed reporting capabilities
- >> On-screen signals and alerts
