

FastGate™ Complete

Portable Access Control

Take access control with you anywhere!

The FastGate™ Complete combines the latest technologies to create a robust, yet portable, access control system. The option to combine the LowCam™ VI110 Under Vehicle Inspection System with the ruggedized FastGate™ Grasp Handheld Access Control product delivers the most comprehensive system on the market. These systems are designed extremely lightweight and transportable and can be established within three minutes at a new location.

The LowCam™ VI110 is the most advanced under vehicle inspection system featuring a single image with zoom capabilities for a crisp, detailed inspection. The LowCam™ VI110 is the first UVIS to offer a built-in license plate recognition camera that captures front and rear vehicle plates. This system can be set-up by one person in under 3 minutes.

The FastGate™ Grasp captures vehicle, driver and passenger information using a 5MP digital camera, 1D/2D barcode reader, magnetic stripe reader, RFID/ smart card reader, fingerprint, and/or signature pad. The unit is a touch screen which displays on-screen alerts if an unauthorized entry is attempted. The Grasp meets MIL-STD 810F for ruggedness.

Single under carriage images, inspection footage, and automatic license plate information captured by the LowCam™ VI110 can be linked using a relational database to the extensive information collected by the FastGate™ Grasp. In conjunction, the two can be used at single gate facilities, multiple gate facilities, or multiple facilities using any combination of entry/exit points. Using a date/time stamp, end users can search a simple-to-use, icon-based database from any remote location via the Internet, that will present all information captured about a facility's guest, visitors, and personnel.

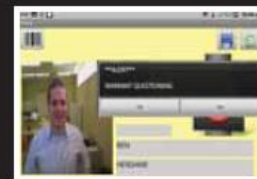

LowCam™ Software

- >> LowCam™ icon based, single image, vehicle queuing, and LPR software
- >> Compare master to current image

LowCam™ Zoomed Inspection

- >> FastGate™ Grasp features driver and vehicle images, 1D/2D barcode, RFID, smart card, and signature pad
- >> Full detailed reporting capabilities on activity

FastGate™ Grasp Checkin Alert Screen

FastGate™ Complete

Portable Access Control

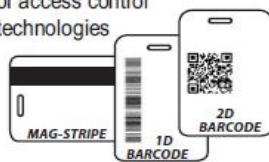

View and Operate the LowCam™ UVIS from the FastGate™ Grasp Handheld Access Control System

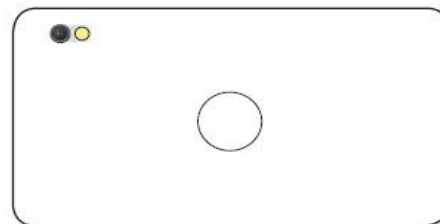

FastGate™ Complete provides critical facilities with the tools to operate and maintain a *complete access control system* for personnel, guest, and vehicles. This system gives management the ability to communicate with and view activity at each entry point and the ability to link information at a single or multiple gate locations.

Utilizes a wide variety of access control technologies

Great for Special Events!
